

Parkview Avenue

A project to make water infrastructure improvements, reconstruct the roadway, and improve biking and walkability on Parkview Avenue is scheduled to start **Monday, March 21.**

The water main under Parkview Avenue will be replaced this year, and we're taking this opportunity to make the street work better for the surrounding neighborhoods too.

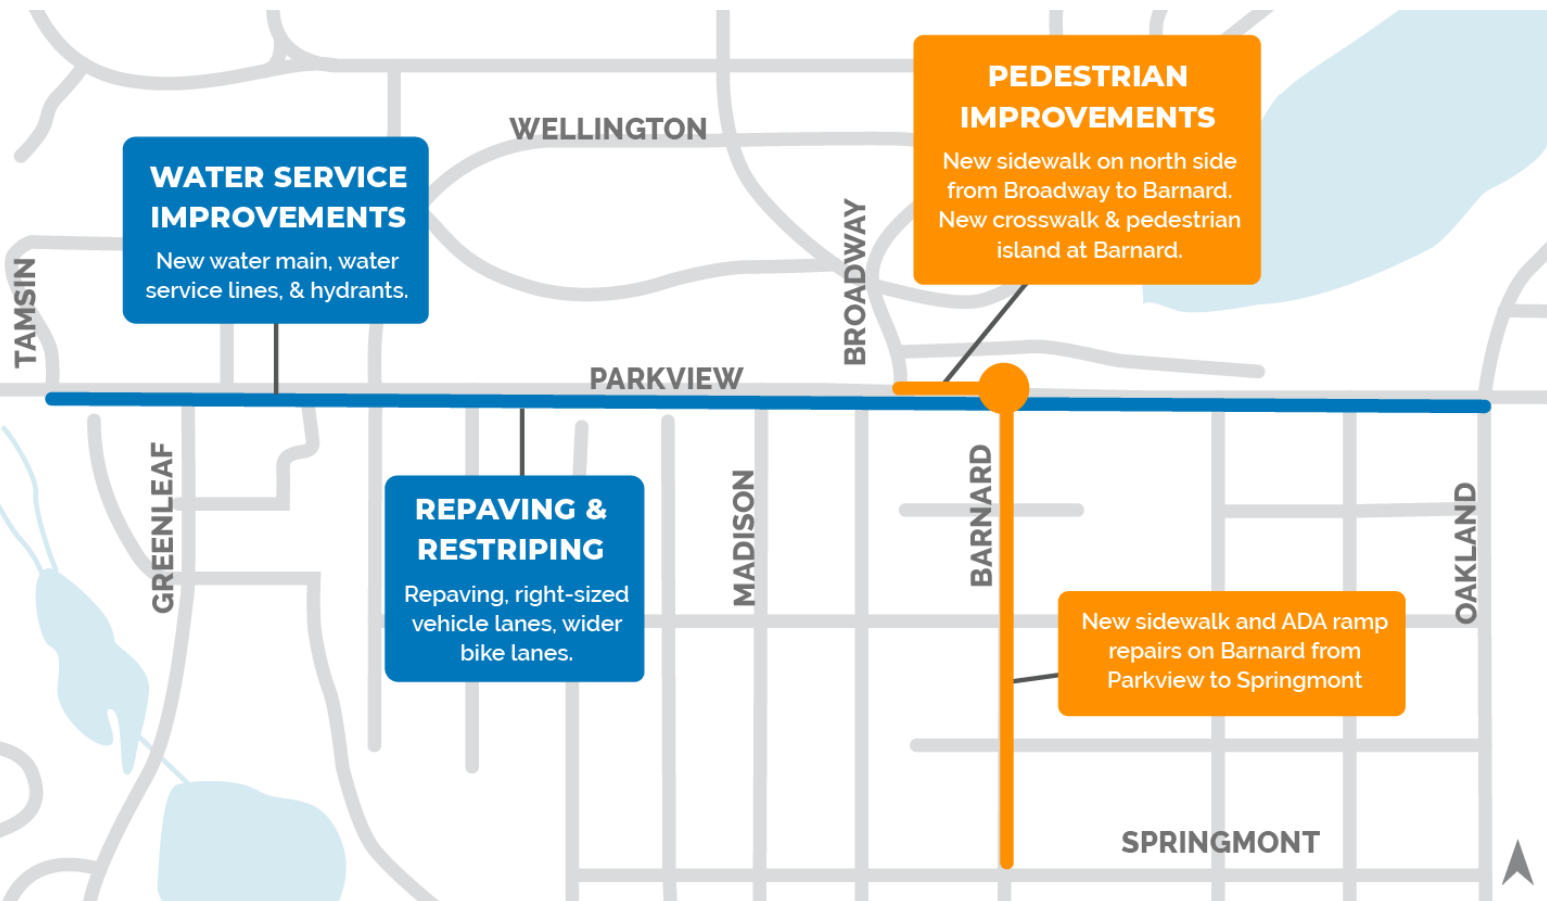

This work is part of a scheduled Capital Improvement Project that was postponed from 2021 due to supply chain shortages. Additional bike and pedestrian improvements included in this project were informed by neighborhood plans. This nearly \$3 million project is funded through the City's Water & Major Streets funds. See the map below for planned improvements.

Water Service Impacts

As new water main is connected to the system, there will be brief disruptions to water service for some properties in the project area. Precautionary boil water advisories should also be expected as a part of this infrastructure work.

Affected residents will be notified in advance of any impacts to their water service. A list of active boil water advisories is also available at kalamazoo.org/bwa.

See back page for Traffic Impacts & Detours →

Traffic Impacts & Detour Routes

The project will be completed in two phases starting **Monday, March 21**. Signed detour routes and message display boards will be present. Pedestrians and bicyclists will have access to the sidewalk along Parkview Avenue for most of the work. Traffic patterns will be monitored by City staff and adjustments will be made as needed. Traffic or speeding concerns can be submitted at www.kalamazoopublicsafety.org/traffic

Phase 1 (March 21 - Early April) Full closure of Parkview Avenue between Knox and Madison.

Phase 2 (April - October) Eastbound traffic maintained & westbound traffic will have signed detour.
